Tektronix Logic Analyzers

TLA7Axx Logic Analyzer Modules

The TLA Series logic analyzer modules offer the highest performance for today’s demanding applications.

Today’s digital design engineers face daily pressures to speed new products to the marketplace. The TLA7Axx Series logic analyzer modules answer the need with breakthrough solutions for the entire design team, providing the ability to quickly monitor, capture and analyze real-time digital system operation in order to debug, verify, optimize and validate digital systems.

Hardware developers, hardware/software integrators and embedded software developers will appreciate the range of capabilities of the TLA7Axx Series logic analyzer modules. Its broad feature set includes capturing and correlating elusive hardware and software faults; providing simultaneous state, high-speed timing, and analog analysis through the same probe; using deep state acquisition to find the cause of complex problems; real-time, non-intrusive software execution tracing that correlates to source code and to hardware events; and non-intrusive connectorless probing.

The TLA7Axx Series logic analyzer modules offer Tektronix’ breakthrough MagniVu™ technology for providing high-speed sampling (up to 8 GHz) that dramatically changes the way logic analyzers work and enables them to provide starting new measurement capabilities. The TLA7Axx modules offer high-speed state synchronous capture, high-speed timing capture and analog capture through the same set of probes. They capitalize on MagniVu technology to offer up to 125 ps timing on all channels, glitch and setup/hold triggering and display and timestamp that is always on at up to 125 ps resolution. The TLA7Axx also offers new capabilities to capture source synchronous applications.
